

## The Ask

Implement a flexible training program with a focus on remote and online learning that meets individual learners' needs.

# How an Ellit Training Experience Improved Proficiency by 50%.

The Ellit Groups Learning and Adoption team supported our client's healthcare practices with their Epic EMR instance, in the creation of a training strategy to improve adoption and provider efficiency.

### Client Objectives

The client had relied heavily on classroom training but realized with the pandemic, that in person training would not be possible. Bridging the gap created by the lack of a personal approach within the classroom was critical to their success.

In addition, they needed new ways to measure learning outcomes to ensure that their clinicians were prepared and could function efficiently.

### Ellit Services

Ellit Groups and Amplifire teamed up to offer Epic training through an adaptive learning platform built in "brain science" to maximize learning and retention.

The team identified knowledge gaps, misinformation and areas of struggle for learners, turning the data into actionable insights to provide learner centric coaching, ensure mastery and improve performance.

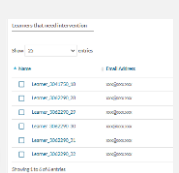

### Value Delivered

- Reduced classroom training time by 72.5% allowing clinicians more time to focus on patient care.
- Misinformation corrected 15%.
- Utilized actionable insights to coach individuals and provide tailored support to improve performance.
- Improved Provider Efficiency Profile scores by 50% using Signal Data and targeted training.

## Key Deliverables

**Risk Avoidance**

**Actionable Insights**

**Content Mastery**
